

CRS-15 Dragon Resupply Mission

MISSION OVERVIEW

SpaceX is targeting Friday, June 29 for an instantaneous launch of its fifteenth Commercial Resupply Services mission (CRS-15) at 5:42 a.m. EDT, or 9:42 UTC, from Space Launch Complex 40 (SLC-40) at Cape Canaveral Air Force Station, Florida. Dragon will separate from Falcon 9's second stage about nine minutes and thirty seconds after liftoff and attach to the space station on Monday, July 2.

An instantaneous backup launch opportunity is available on Sunday, July 1 at 4:54 a.m. EDT, or 8:54 UTC.

Both Falcon 9 and the Dragon spacecraft for the CRS-15 mission are flight-proven. Falcon 9's first stage previously supported the TESS mission in April 2018, and Dragon previously supported the CRS-9 mission in July 2016.

SpaceX will not attempt to recover Falcon 9's first stage after launch.

Official SpaceX CRS-15 Mission Patch

DRAGON SPACECRAFT

Dragon will be filled with more than 5,900 pounds of supplies and payloads, including critical materials to directly support more than 250 science and research investigations that will occur onboard the orbiting laboratory.

CRS-15 is the fifteenth of up to 20 missions to the International Space Station that SpaceX will fly for NASA under the first CRS contract. In January 2016, NASA announced that SpaceX's Falcon 9 launch vehicle and Dragon spacecraft were selected to resupply the space station through 2024 as part of a second Commercial Resupply Services contract award. Under the CRS contracts, SpaceX has restored the United States' capability to deliver and return significant amounts of cargo, including live plants and animals, to and from the orbiting laboratory. A variant of the Dragon spacecraft, called Crew Dragon, is being developed for U.S.- based crew transport to and from the space station.

ISS CAPTURE

On Monday, July 2 International Space Station crew members will use the station's 57.7-foot (17.6-meter) robotic arm to reach out and capture the Dragon spacecraft and attach it to the orbiting laboratory.

RETURN FLIGHT

Dragon will return to Earth with more than 4,000 pounds of cargo after an approximately one-month stay at the International Space Station. About five hours after Dragon leaves the space station, it will conduct its deorbit burn, which lasts up to 10 minutes. It takes about 30 minutes for Dragon to reenter the Earth's atmosphere and splash down in the Pacific Ocean off the coast of Baja California.

MISSION TIMELINE (ALL TIMES APPROXIMATE)

COUNTDOWN

Hour/Min/Sec Events

01:13:00	SpaceX Launch Director verifies go for propellant load
01:10:00	RP-1 (rocket grade kerosene) loading underway
00:35:00	LOX (liquid oxygen) loading underway
00:07:00	Falcon 9 begins engine chill prior to launch
00:01:00	Command flight computer to begin final prelaunch checks
00:01:00	Propellant tank pressurization to flight pressure begins
00:00:45	SpaceX Launch Director verifies go for launch
00:00:03	Engine controller commands engine ignition sequence to start
00:00:00	Falcon 9 liftoff

LAUNCH AND DRAGON DEPLOYMENT

Hour/Min/Sec Events

00:01:19	Max Q (moment of peak mechanical stress on the rocket)
00:02:45	1st stage main engine cutoff (MECO)
00:02:48	1st and 2nd stages separate
00:02:56	2nd stage engine starts
00:08:31	2nd stage engine cutoff (SECO)
00:09:31	Dragon separates from 2nd stage
00:11:00	Dragon's solar arrays deploy
02:20:00	Dragon's Guidance, Navigation and Control bay door opens

LAUNCH FACILITY

Space Launch Complex 40 at Cape Canaveral Air Force Station, Florida

SpaceX's SLC-40 at Cape Canaveral Air Force Station is a world-class launch site that builds on a strong heritage. The site, located at the north end of Cape Canaveral Air Force Station, was used for many years to launch Titan rockets, among the most powerful in the U.S. fleet. SpaceX took over the facility in May 2008.

The center of the complex is composed of the concrete launch pad and flame diverter system. Surrounding the pad are four lightning towers, propellant storage tanks, and the integration hangar. Before launch, Falcon 9's stages and payload are housed inside the hangar. The Dragon spacecraft is mated to the Falcon 9 on the transporter erector inside SLC-40's hangar. The rocket and payload are then rolled out from the hangar to the launch pad and lifted to a vertical position prior to launch.
